

SYSTEMS AND METHODS FOR LINKING
BIDS AND OFFERS IN A TRADING INTERFACE

Abstract Of The Disclosure

Systems and methods for linking bids and offers in a trading interface are provided. The systems and methods of the present invention are directed particularly towards linking bids and offers related to the same or similar items (e.g., currency, stocks, bonds, futures contracts, energy). A user may enter parameters for linking bids and offers. The user may enter bids and offers. The parameters may be entered prior to, or concurrently with, the entry of the bids and offers. In response to a trading system receiving parameters and bids and offers entered by a user, the trading system may generate an offer and a bid substantially simultaneously. Generating an offer and a bid substantially simultaneously may reduce the adverse affects of changed market conditions on the latter of an entered bid or offer.
